J.A.K. Water Systems Ltd

MIST-IFY

TOUCHLESS HAND DISINFECTION SYSTEM

Kills 99.99% of all germs and viruses in just 10-15 seconds

Approximately 100 times more effective than gels

+44(0)1789 333313 | sales@jakwater.co.uk | www.jakwater.co.uk

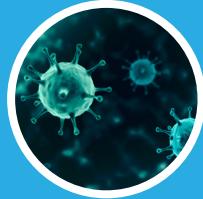

Automatic sensor-operated touchless hand disinfection machine

Designed to dispense hand sanitiser mist, which enables quick and easy hand disinfection and eliminates cross-contamination, achieving optimal hand hygiene.

Once charged it can run for up to 2-4hrs (charging cable included). The built-in bottle capacity of 150ml which equals around 200 sprays of fine mist during each use. It is a reliable system with a long service life suitable for home and any public place.

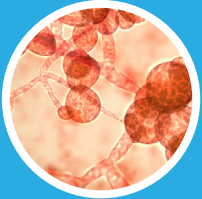

Instant Kill (Hypochlorous acid)

VIRUS

BACTERIAL SPORES

BACTERIAL PROPAGULES

FUNGUS

Substantially more effective at killing harmful bacteria and viruses than standard household disinfectants and exceeding the performance of alcohol-based hand sanitisers and is approximately 100 times more effective. Hypochlorous acid provides an instant kill so you can be reassured once applied to the hands or fogged into a room the risk of spread is stopped dead.

Instant Sanitiser Kills 99.99% of viruses and bacteria

Instant Sanitiser is an anti-viral hand & surface disinfectant. Effective against a wide range of viruses, bacteria and spores, and laboratory proven to completely kill 99.99%. Hypochlorous acid is nature's oldest disinfectant, and it happens to be walking around in about 7.5 billion people right now. As in inside all humans this very moment. It is the substance your white blood cells produce to fight off infections.

It is also the active ingredient in electrolysed water, which is an industrial technology used for green cleaning and sanitising. Nature's super powerful disinfectant, and the ingredient that gives bleach its anti-microbial power. When the pH of the solution is lowered to the correct level, HOCl is created, the same substance that is your immune system's germ fighter.

Why our hypochlorous acid (HOCl) sanitiser is the ultimate disinfectant?

Hypochlorous acid (HOCl) is a natural substance our body produces as a first line defence against pathogens. It is extremely safe, biodegradable and non-corrosive. It is non-flammable and chemical free.

HOCl is FDA /EPA/CE approved for skin, food and surfaces contact. This material was proven to be effective not just against Coronavirus but also against harmful pathogens including; E.coli, Salmonella, Listeria, MRSA, Staphylococcus aureus, Klebsiella pneumoniae, Covid-19 and more.

Other commercial disinfectants can cause more irritation to skin, are more corrosive and much less effective given the same active material concentration (0.005-0.02%).

It is a gentle mist that dries easily. The feeling is refreshing like walking through a "non-condensed cloud". We are also controlling the droplet size for that fine mist effect.

The product has no pungent smell, is sensitive to skin, non-flammable, safe to transport and store and is ideal for general indoor disinfection, hand sanitising, clothing and in-car general purpose sanitisation.

Perfect for

- INDOOR USE
- HAND SANITISATION
- IN-CAR APPLICATION
- CLOTHING DISINFECTANT
- NO PUNGENT SMELL
- SENSITIVE TO SKIN
